

(a) Gold adaptation learning curves

(b) Selected checkpoints by seed

Paired deltas (public4k minus gold_only): seed 7: selected +0.067, final-epoch +0.067; seed 19: selected +0.071, final-epoch +0.072; seed 37: selected +0.064, final-epoch +0.064. Zoomed score axes. DEV-selected scores on the same gold schedule; public arm starts from the fixed seed-7 public parent with additional public compute; no independent test estimate.
